

DAYCO® AUTOMOTIVE SERPENTINE BELTS

ARAMID REINFORCED TECHNOLOGY FOR LONGER SERVICE LIFE

Compliant with the latest industry standards, Dayco's extensive line of OE-quality automotive serpentine belts are engineered for millions of high-mileage, worn, misaligned or demanding drive systems found in many of today's vehicles. The belts are comprised of aramid reinforced EPDM compounds to resist cracking, reduce elongations and operate smoothly under extreme temperature ranges.

Designed to extend securely over the pulley system, the rib profile helps eliminate noisy belt conditions for a quieter operation. Dayco serpentine belts (also referred to as poly-v belts) maximize service life, improve load carrying requirements and offer extensive flexibility, all while handling multiple accessories and a wide range of operating conditions.

FEATURES:

- Maintains required belt tension and resists elongations over the life of the belt
- Aramid reinforced EPDM compounds allow for high flex use on smaller diameter pulleys
- Unique rib profile offers less slippage and greatly reduces noise and vibration issues

BENEFITS:

- Full coverage for today's light-duty market, especially vehicles with troublesome drives
- Extensive laboratory and road testing conducted by Dayco ensures reliability and better performance than OE
- Handles high workloads and temperatures for longer service intervals, and is backed by an industry-leading warranty
